### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with William W. Schaal on 22 May 2007.
3. The application has been amended as follows:  
Claims 25, 34, 37, and 49 have been amended to read:  
  
25. An article of manufacture including a machine-readable medium having encoded thereon instructions that executed by a processor, cause the processor to perform the operations comprising:  
  
detecting a tuning event where a channel is continuously tuned in for over a selected period of time;  
  
maintaining relative statistics on one or more items related to the tuning event by eliminating any occurrence of rollover of a count value through adjustment of the count value of each of the one or more items relative to each other upon the count value reaching a predetermined value and being reset when the count value is next incremented; and  
  
creating automatically a list of favorites based on the maintained relative statistics.

34. A broadcast system comprising:

a display;

a receiver coupled to the display and to store relative statistics, to detect a tuning event, to maintain the relative statistics related to a plurality of items of the tuning event, to eliminate any occurrence of rollover of a count value by automatically adjusting the count value of each of the plurality of items relative to each other once one of the plurality of items reaches a maximum value so that an order of the plurality of items according to count value remains intact, and to create automatically a list of favorites based on the relative statistics in the memory.

37. A method for a broadcast system comprising: detecting a tuning event:

maintaining relative statistics on one or more items related to the tuning event, the maintaining of the relative statistics includes eliminating any occurrence of rollover of count values by adjusting the relative statistics of each item of the one or more items in response to a count value of a first item of the one or more items reaching a predetermined value, the rollover being a condition where the count value of the first item of the one or more items, the count value being a relative statistics of the one or more items, reaches the predetermined value before being reset; and

creating a list of favorites based on the maintained relative statistics.

49. An apparatus comprising:

a front-end including a tuner;

a memory to store relative statistics;

and a processor in communication with the front-end and the memory, the processor to (i) detect a tuning event, (ii) maintain the relative statistics on one or more items related to tuning events, the relative statistics include a count value identifying either a number of times or a time interval that the item has been tuned to and received by the front-end, (iii) eliminate any occurrence of rollover of the count value by at least adjusting the count value of each of the one or more items relative to each other upon reaching a predetermined value prior to being reset, and (iv) create a list of favorites based on the relative statistics in the memory.

***Allowable Subject Matter***

4. The following is an examiner's statement of reasons for allowance:

The art of record wither alone or in combination fails to teach or suggest the particular elimination of a rollover of count values by relativistically reducing the count values relative to one another so as to determine favorite programming.

As to the closest art of record, only APA provides evidence as to a roll over condition in association with maintaining statistics or counts within a STB. The other references of record, however, are generally silent with respect to roll over conditions in association with maintaining statistics so as to determine favorite channels/programming. The Bedard reference generally provides a method for relativistically reducing the count values relative to

one another in conjunction with determining favorite programming. However, the Bedard reference and other similar references are silent as to whether or not a theoretical rollover ever occurs such that the particular reduction in statistical counts necessarily eliminates a roll over conditions as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
